

# Clinical

OpenCGA 1.4.0 implements a complete solution for working on Clinical Analysis, this includes:

**Table of Contents:**

<b>Clinical Data DB</b>	Advanced and flexible database for storing clinical data.
<b>Security</b>	Authenticated and secured, you can set fine-grained permissions.
<b>Clinical Analysis</b>	Several clinical interpretation analysis implemented
<b>Pathogenic Variant DB</b>	A database that allows users to query and aggregate any interpreted variant.
<b>Web Services</b>	A complete REST API to manage and query clinical data, this allows an easy integration in pipelines. Several clients implemented
<b>Visualization</b>	A rich and modern web data portal to explore and execute clinical analysis.

We [are](#) working on the documentation, this will be available very soon.
