Clinical

OpenCGA 1.4.0 implements a complete solution for working on Clinical Analysis, this includes:

Clinical Data DB	Advanced and flexible database for storing clinical data.
Security	Authenticated and secured, you can set fine-grained permissions.
Clinical Analysis	Several clinical interpretation analysis implemented
Pathogenic Variant DB	A database that allows users to query and aggregate any interpreted variant.
Web Services	A complete REST API to manage and query clinical data, this allows an easy integration in pipelines. Several clients implemented
Visualization	A rich ad modern web data portal to explore and execute clinical analysis.

We are working on the documentation, this will be available very soon.
