

# Command Line Interface (CLI)

HGVA CLI is powered by the [Open Computational Genomic Analysis \(OpenCGA\)](#) project and makes intensive use of the HGVA's RESTful Web services. OpenCGA CLI implements an extensive API that enables numerous operations over metadata, samples and genomic data. The CLI is implemented by JCommander and organises its functionality by using *commands*, *subcommands* and *parameters*. Please, refer to the tutorial [Using the Command Line](#) for further information.
